

EasyPrintID for Printing Labels

Quick Reference Guide

Bar Code Printing Automation Software

Print directly from most LIMS to any printer on your network

Product Attributes

EasyPrintID provides a method of generating barcode labels for laser, ink jet, or thermal transfer printers from various data files and most LIMS systems.

- Map multiple data sources for printing
- design a label format with variable fields from your data source
- Setup multiple formats for any printer(s) without hard coding
- Low total cost of ownership (TCO)
- Rapid return on investment (ROI)
- Supports all linear and 2D bar code symbologies

Key Product Highlights

- User-definable sweep folders with variable intervals for printing
- Print to any laser and/or thermal transfer printers
- Generate reports on print transactions and error logs

Product Benefits

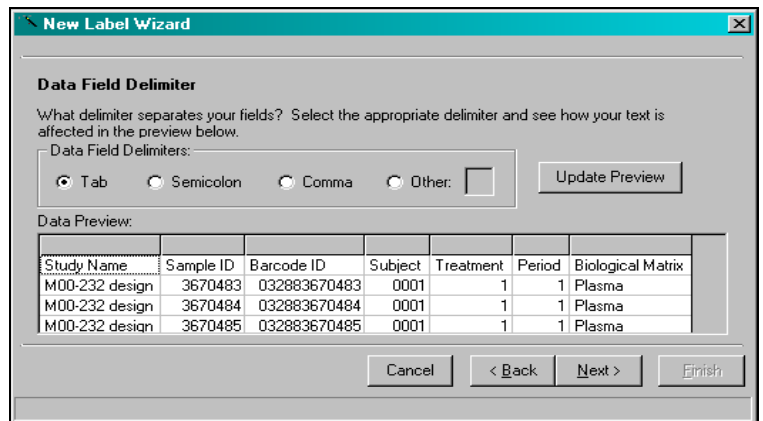

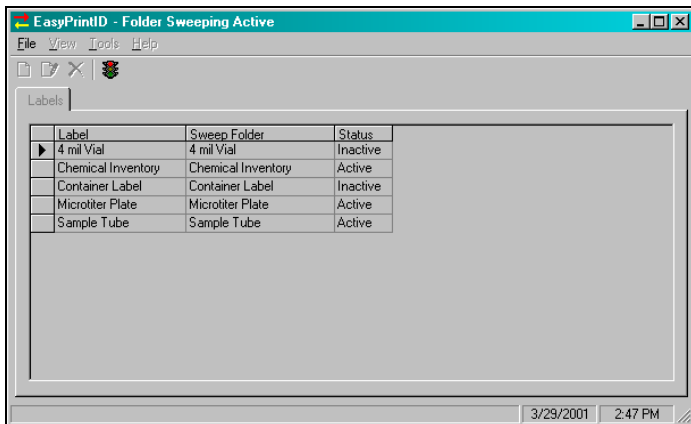

- Automate printing from third-party applications, i.e., LIMS systems, Microsoft Excel, Access, etc.
- Easy label creation and design
- No programming changes to third party applications

Optional Upgrades

- Client-server or web interface
- Additional format support

Consulting Services

We provide analysis, specification, design, documentation, and development for an entire label printing and tracking process.
